Support, replenish and protect with the stroke of a brush

MI Varnish from GC treats hypersensitive teeth and provides enhanced long term protection more convenient and efficient than ever before
GC introduces MI Varnish, the latest addition to your minimum intervention dentistry arsenal. Offering superior coverage of tooth surfaces, MI Varnish does substantially more than your average fluoride varnish.

By delivering a powerful dose of fluoride, MI Varnish delivers an added booster effect of calcium and phosphate ions through its patented Recaldent™ ingredient.

How MI Varnish works
Thanks to the world renowned Recaldent™ MI Varnish gives patients a head start in caries protection.

Without MI Varnish
In the acidic environment of the mouth, calcium, phosphate and hydroxyl ions dissolve from the tooth. This will cause the tooth to become weaker and more vulnerable.

With MI Varnish
Fluoride, calcium and phosphate combine and form a strong protective coating. The neutral pH of 6.6 enhances enamel acid resistance and inhibits demineralisation.

Coating with depot effect
In an acidic environment, calcium and fluoride dissolve from the covering layer. As a result, the teeth are no longer under direct attack by acids.

• MI Varnish penetrates and blocks dentinal tubules to give relief from hypersensitive teeth
• The high initial fluoride release minimises sensitivity and strengthens enamel

The simple application requires no preparation or prophylaxis
Comfortable and quick procedure completed within minutes

Adheres quickly to the applicator brushes and flows easily in hard to reach areas
Covers all tooth surfaces evenly and effectively

MI Varnish sets when in contact with water or saliva, without clumping or coagulating
Pleasant creamy texture, comfortable film thickness, even with multiple layers

Available in 2 great tasting flavours, mint & strawberry
Pleasant taste for patients

Neutral shade with natural translucency
No colour change when applied to the tooth

MI Varnish, achieving mutual benefits
MI Varnish forms part of a total MI treatment strategy

GC offers dentists the necessary tools to manage a minimum intervention continuum of care with a full suite of tailored products, ranging from diagnosis to prevention and treatment. While MI Varnish provides high level protection and reduced sensitivity at the chairside, MI Paste can be used as follow up treatment for a patient's home care regime, extending the remineralisation effect.

In office
Professional application of MI Varnish at intervals, determined by indication and patient needs.

At home
Daily application of Tooth Mousse or MI Paste Plus provides continued remineralisation and caries protection.

Recaldent™ CPP-ACP is derived from milk casein, and should not be used on patients with any milk protein and/or hydroxybenzoates allergy.
